**End to end
support for your
business.**

snapGrowing Highlights

Combines 20 years industry experience with the latest Cloud technologies. Use snapGrowing from anywhere, on your phone, tablet or PC.

Financial forecasts offer a comprehensive model to generate a P&L driven from your orchard details (trees, fruit per tree, average size, pack outs). Set up your own income and flexible cost structures.

Draw your own professional maps including boundaries, production sites, trap locations, planting statistics, and more for registrations and compliance.

Flexible record keeping – configure your own topics to meet compliance and audit requirements. Subscribe to receive daily or weekly update emails. Calendar view shows historic events and future reminders.

Equipment register allows you to track your major assets, registrations, certifications, mileage and hour readings, service logs and photos.

Staff qualifications entered with certificates and expiry dates and upcoming renewal reminders.

Harvest management – monitor labour requirements, print bin labels and build packhouse submissions right in the orchard and capture picker details for payroll.

Timesheet entry for individuals or teams – coded to your plantings and activities, support piecework rates, and export to your existing payroll software with optional minimum wage and break adjustments.

Spray diary – print instructions and record the work done with final information sent to AsureQuality to issue clearance dates.

Chemical inventory supports multiple chemical stores and integrates directly with your spray diary. Record purchases, transfers and stocktakes.

Trap log tracks cumulative findings, triggers required threshold sprays, and highlights when cap and base changes are required.

From forecasting to harvest our suite of integrated tools support New Zealand growers managing their business and delivering quality produce for optimal returns.
