business.**

snapSales Highlights

Combines 20 years industry experience with the latest Cloud technologies. Use snapSales from anywhere, on your phone, tablet or PC with no need for in-house servers.

Full support for apple and pear industry standards – from the same team that wrote many of those standards!

Integrate with NZ Customs, MPI and shipping lines without 3rd party software.

Dashboards provide key insight into the current season and comparison against historical performance.

Impress your customers with your ability to search your inventory and drill through from containers to pallets, to product lines, and so on ...full traceability!

Efficient and accurate:

- Import EDI files in seconds.
- Prepare default shipping documents with one click.
- Need to adjust your sale costs? No problem. Sale costs remain linked to their source allowing you to update all sales in seconds.
- Actual invoices can be coded to the product they relate to – variety, pack, storage type, packer, customer, destination, and many other attributes. This allows you to compare expected costs to actuals using those same attributes.

Flexible:

- Pay your suppliers based on pooled returns, sale-by-sale returns or fixed prices.
- snapSales can be customised to suit your needs – from customer specific EDI files to reports and financial integration, we can help.

Focus your team on sourcing and selling produce. Reduce the administrative burden and support them with actionable information.
